

As the snail and the whale travelled, they passed different countries with different climates. Did you notice the penguins and seals in the cold climate and the monkeys and parrots in the hot climate?

Why don't you do a little research on the animals that live in different habitats?

Here are some links to get you started...who knows where you will end up?

What is a polar habitat?

<https://www.bbc.co.uk/bitesize/topics/zx882hv/articles/z3sr4wx>

What is a rainforest habitat?

<https://www.bbc.co.uk/bitesize/topics/zx882hv/articles/zxdsvcw>

What is a desert habitat?

<https://www.bbc.co.uk/bitesize/topics/zx882hv/articles/zsqnfg8>

If you prefer, you can use small tubs or plates to create habitats for your toy animals (if you don't have any, why not draw some on cardboard and cut them out or make some from playdough). Use things you find around your house or garden such as soil, sand, salt, pebbles, grass, twigs etc to create the base for the habitat.

Why not choose your favourite animal and draw the habitat in which it lives? You can do this on paper or use paper plates to make a 3D habitats like the ones below.
