

Ocean Food Chains

Some animals get their food from eating plants. These are called Herbivores.

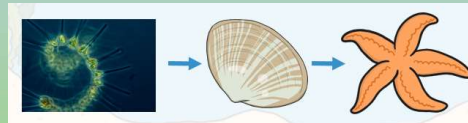

Some animals get their food by eating other animals. These are called Carnivores.

Some animals eat plants and animals. These are called Omnivores.

A Food Chain shows how each animal gets its food. Food chains show the ways that living things depend on each other to stay alive. The arrows mean 'eaten by' or 'energy transferred to'.

Can you research what different oceans animals eat?

Creating Food Chains

Use these living things to draw a food chain.
Remember to draw the arrows to show who eats what!
